

NOTES

What do you understand by a biome? Provide an account of the major biomes of the world and their characteristics.

A biome is a large ecological area on the Earth's surface with distinct climate, flora, and fauna. It is defined by factors like temperature, precipitation, and the types of plants and animals that live there. Biomes are classified into terrestrial (land-based) and aquatic (water-based) categories. Here's an overview of the major terrestrial biomes and their characteristics
